

# Release Notes: ProcessMaker 3.3.12

Release Date: June 24th, 2019

This document contains Release Notes for ProcessMaker 3.3.12. Release Notes are cumulative, and document improvements and bug fixes associated with this release unless otherwise noted. [A list of older ProcessMaker release notes is included at the end of this document.](#)

## Links to System Requirements and Special Instructions for This Release

1. [Supported Stacks](#)
2. [Supported Web Browsers](#)
3. [ProcessMaker 3.3.0 or later must be installed to upgrade to ProcessMaker 3.3.12](#)
4. The [point release upgrading](#) requires to run `flush-cache` command.

## Associated Releases

ProcessMaker 3.3.12 was released concurrently with the following releases:

- [Business Rules 3.1.3](#)

## Improvements

This section documents improvements for ProcessMaker 3.3.12:

1. **Advanced Search Loader:** After clicking **Search** or pressing **Intro**, the [Advanced Search](#) improves by indicating that searching is in progress and it will take a while. This improvement also provides the option to stop searching.
  - **Business Value:** This indicator avoids long waiting when using filter criteria in the Advanced Search.

## Bug Fixes

This section documents bug fixes for ProcessMaker 3.3.12:

1. **Grid pagination now updates correctly:** Grid pagination now displays correctly the row numbers after submitting or saving a Dynaform.

2. **The setValue helper now can set a dropdown after loading the Dynaform:** Using the setValue helper, dropdowns with queries now can change their value as soon as the Dynaform loads. It previously required that the user interacts with the dropdown to populate the domain.
3. **The performance now is improved when using big databases:** The performance now is improved when using big databases in the following scenarios:
  - [Opening a case with the Jump To option](#)
  - [Opening a case with a link from the mobile browser](#)
  - Using the REST Endpoints to [set variables](#) (also the mobile REST Endpoint), [get Input Documents](#), [delete an Input Document](#), [generate an Output Document](#) and [remove an Output Document](#) in a case.
4. **Batch Routing configuration no longer displays an error:** In a task [Batch Routing](#) configuration, after clicking **Save** no longer displays an error message.
5. **The Category filter now works properly in Advanced Search:** In the [Advanced Search](#), cases now filter properly by category with any combination using it. Follow the guidelines when using the Advanced Search:
  - If no category is selected the filter searches all the cases regarding all categories.
  - If a category is selected the search narrows to the process(es) assigned to that specific category.
  - If a category is selected and no process has been selected, search returns no cases.
6. **A logged on ProcessMaker user no longer displays users' information when accessing the data\_usersList.php file:** A logged on ProcessMaker user no longer displays users' information by accessing the URL:  
`http://<URL>/sys<workspace>/<language>/<skin>/users/data_usersList.php`

## Previous Release Notes
