8. It is recommended to use the HTTP/2.0 protocol.

Improvements

This section documents improvements for ProcessMaker 3.7.6:

1. **Header and Footer for Output Documents:** Settings for header and footer for TCPDF Output documents in PDF output.
2. **Process designers set groups for permissions:** Process designers set groups with the PM_FACTORY permission.
3. **Automatic Claim and Unpause confirmation dialogs:** The PMCaseLink function result now displays cases in the following scenarios:
 - When there are parallel threads, display the Unassigned list
 - When there are parallel threads, display the Paused list
 - When there are mixed parallel threads, the list displays based on the status type
 - If there is one thread, the form displays automatically, otherwise it displays the Inbox search filter
 - If there is one thread, the Unpause dialog displays automatically, otherwise, it displays the Paused search filter

- If there is one thread, the Claim Case dialog displays automatically, otherwise, it displays the Unassigned search filter

Security Vulnerability Fixes

This section documents security vulnerability fixes for ProcessMaker 3.7.6:

1. **CSS URL displays correctly:** The `{{SERVER}}/css/.css` URL no longer displays extra information about the installed ProcessMaker.

Bug Fixes

This section documents bug fixes for ProcessMaker 3.7.6:

1. **Administrator role works as expected:** The `PROCESSMAKER_ADMIN` role no longer displays a console error when unassigning permissions. The following alert displays: **The permission can not be unassigned from this role.**
2. **The Blog link is fixed:** In the Dashboard tab, the **Blog** link is fixed.
3. **The upload file in preview mode now alerts correctly:** The Multiple File Uploader control alerts correctly when previewing the Dynaform.
4. **Case History displays correctly the Timezone:** The Case History displays correctly the date when the `system_utc_time_zone` is enabled in the `env.ini` file.
5. **Unassigned cases work correctly when using the Jump option:** In the Advanced Search, when jumping to a case, the unassigned cases cannot be reassigned. The following message displays: **The current user was not defined.**
6. **The Load More option works correctly when using case filters:** In Custom Case Lists, the **Load More** option works correctly when using case filters after changing the case view mode.
7. **The Custom Case List counter displays correctly:** The Custom Case List counter displays correctly in the following format:
Number of Tasks in the [FOLDER] folder: [NUMBER]
[Custom case list title]: [Custom case list description]
8. **Advanced Search filters cases correctly:** Advanced Search filters cases by task correctly regardless of the case status.
9. **isset(@@error) works correctly:** The `isset(@@error)` function evaluates correctly in steps and triggers.

10. **Radio Button Label correctly displays:** The Radio Button Label property value displays correctly in view mode when the value is set via trigger.
11. **The Output Documents generate PDFs accordingly:** The Output Documents generate PDFs accordingly to the configured size area.
12. **Custom Case Lists sort correctly:** Custom Case Lists sort correctly by all configured fields.
13. **The Records dropdown no longer is available:** The **Records** dropdown no longer is available in the **Home** trays.
14. **Large processes save and update with no time delays:** Large processes with at least fifty BPMN elements save and update with no time delays optimizing the performance.
15. **Auto Increment columns removed in Report Tables:** Auto Increment column removed from Report Tables column settings.

Known Issues

This section documents known issues for ProcessMaker 3.7.6:

1. **The Clear button not working correctly:** When [sorting by case number](#), the **Clear** button does not work correctly.
