Bug Fixes

This section documents bug fixes for ProcessMaker 3.6.5:

1. **Failure in routeCase() web service for the calculation of Due Date column based on a defined calendar:** The due date calculates based on the calendar hours even if the routeCase() is used when the case is routed normally.
2. **Maximum length password higher than 32 characters is working:** The maximum number of characters that can be used in passwords is 100 characters. This applies to Login page, Enhanced login, Forgot password, and create new user and edit user.
3. **Strange behaviors when using the tab index property in a button control:** Tab Index does not cause any error while jumping from any web component. Only integer values should be accepted in the Tab Index Field Property.
4. **Alerting messages no longer display in the Dynaform User Interface:** The alerting messages no longer display throughout the ProcessMaker user interface when a dependent field is not populated. Instead, alerting messages are reported using the **console log**.
5. **The file is still in active status when it is removed using the link to fill in a form:** When a file is deleted and the case updates, the APP_DOC_STATUS changes to DELETED.
6. **All labels from ProcessMaker 3.6.x can be translated:** All labels in ProcessMaker 3.6.x can be translated and installed from a separate portable object (po) file.
