

# Release Notes: ProcessMaker 3.7.5

Release Date: May 4th, 2022

This document contains Release Notes for ProcessMaker 3.7.5. Release Notes are cumulative, and document bug fixes associated with this release unless otherwise noted. [A list of older ProcessMaker Release Notes is included at the end of this document.](#)

## Links to System Requirements and Special Instructions for this Release

1. [Supported Stacks](#)
2. [Supported Web Browsers](#)
3. [Review the ProcessMaker versions to upgrade to ProcessMaker 3.7.x](#)
4. This release installation requires to run the [flush-cache](#) command.
5. This release installation requires to run the [translation-repair](#) command.
6. MySQL 8 is more restrictive regarding the use of Reserved Words. Please see [MySQL 8.0 New Keywords and Reserved Words](#).
7. It is recommended to use the HTTP/2.0 protocol.

## Improvements

This section documents improvements for ProcessMaker 3.7.5:

1. **Delete icon relocated:** The **Delete** icon now is a third option in the **Action** menu to have a better and safe experience.
2. **Web Entries and SAML sessions improved:** Web Entries now do not display whether to close or continue with the current session in the following scenarios:
  - An Anonymous Web Entry with an active SAML session
  - A Logged Web Entry with an active SAML session
  - A Logged Web Entry with an active ProcessMaker session

## Security Vulnerability Fixes

This section documents security vulnerability fixes for ProcessMaker 3.7.5:

1. **File removed:** The old file `http://<server>/sys<workspace>/en/neoclassic/cases/proxyNewCasesList` was removed due to cross-site scripting.

## Bug Fixes

This section documents bug fixes for ProcessMaker 3.7.5:

1. **List and Card task views fixed:** List and Card [task views](#) no longer display duplicated cases.
2. **Report Tables fixed:** Take into account the following:
  - After editing a Report Table, the report schema is also updated.
  - If deleting a ProcessMaker variable associated with a Report Table, the following message displays: **Bad Request: The variable "{variable\_name}" is associated with a report table, which requires it to be removed first before allowing deleting it.**
3. **Task Transfer Date column updated:** The **Task Transfer Date** column now correctly displays the reassignment date when there is a case reassignment. Note that this bug solution works for new reassignments.
4. **Custom Case List fixed:** Process Name, Process Category, and Task filters do not work with Custom Case Lists. New Custom Case Lists reset all previously stored filters.
5. **Advanced Search fixed:** Searching by **Status**, **Started By** and **Completed By** filters now filter cases correctly.
6. **The Admin user no longer is removed:** The Admin user no longer is removed when using the Rest API or the Web Application.
7. **Case REST APIs return values correctly:** The following Case REST APIs return values correctly by fixing the attributes calling:
  - /api/1.0/{workspace}/cases/{app\_uid}
  - /api/1.0/{workspace}/cases/{app\_uid}/variables
  - /api/1.0/{workspace}/cases/{app\_uid}?dyn\_uid={dyn\_uid}
8. **Protection to core tables fixed:** Queries no longer update core tables.
9. **Audit Log record correctly:** Audit Log records correctly when creating, editing, and deleting a Dynaform.

## Previous Release Notes

Refer to the previous Release Notes from ProcessMaker versions 3.2 through 3.7.4:

- [3.7.4](#)
- [3.7.3](#)
- [3.7.2](#)
- [3.7.1](#)
- [3.7.0](#)
- [3.6.5](#)
- [3.6.4](#)
- [3.6.3](#)
- [3.6.2](#)
- [3.6.1](#)
- [3.6.0](#)
- [3.5.11](#)
- [3.5.10](#)
- [3.5.9](#)
- [3.5.8](#)
- [3.5.7](#)
- [3.5.6](#)
- [3.5.5](#)
