3. [Review the ProcessMaker versions to upgrade to ProcessMaker 3.5.x.](#)

Improvements

This section documents improvements for ProcessMaker 3.5.1:

1. **Added option in Environment Settings:** The **Counters Refresh Time (seconds)** ProcessMaker environment setting that sets in how many seconds tray folders refresh is improved. Tray refresh time may occur in as little as 30 seconds.

Bug Fixes

This section documents bug fixes for ProcessMaker 3.5.1:

1. **Completed By Me filter only shows completed cases by that user:** The **Completed By Me** filter now only shows those cases the logged on user completed.
2. **The > character is not encoded in case notes:** When the > character is included in case notes, it no longer removes the case note text.
3. **Jump To option selects the correct delegation status from the database:** Despite the DELEGATE_DATE value in the database, the **Jump To ProcessMaker** option now selects the correct status. This fix improves the display of case properties when claiming cases.
4. **Checkboxes display values correctly:** Checkbox controls in Dynaforms now display their labels with the correct values.
5. **Dynaforms opened from ABE links display uploaded files correctly:** Files uploaded with the Multiple File control now display in Dynaforms when opened from an Actions By Email (ABE) link.

6. **Advanced Search inbox displays the correct cases when using saved user filters:** After doing an Advanced Search using the user filter, clicking in other cases' inboxes, and then returning to Advanced Search, the inbox lists the correct items.
7. **Suggest fields display the configured number of results:** The configured **Results Limit** number now is the same as the amount of results for suggest controls.
8. **User filter may now be removed from an advanced search:** The **User** filter now correctly filters by a specific ProcessMaker user and no longer shows case results corresponding with that user.
9. **APP_NUMBER values are the same between APPLICATION and APP_MESSAGE tables:** The APPLICATION and APP_MESSAGE tables from the database now share the same values as the APP_NUMBER field for consistency.
10. **Suggest field keeps the clear option when deleting a row:** Suggest controls now retain the icon to remove a row from the grid control.
11. **Checkgroup field with a value that has more than one word selects data correctly:** Checkgroup controls now select the data correctly when selecting a value that has more than one word.
12. **Suggest field is aligned with other controls in Dynaforms:** Suggest controls now keep the same alignment respective to other Dynaform controls.
13. **Designer lays out Debug column:** The column that indicates the status of the debug option in the process list of the designer displays the correct status.
14. **Suggest field clears the values correctly:** Values are removed properly when clicking the empty button on a suggest control.
15. **Dependent field values are added correctly to a grid when adding a new row with JavaScript:** Dependent field controls that add values to a grid using JavaScript add the correct values with suggest and dropdown controls.
16. **Fixed a control access vulnerability in the Case Tracker:** The current user session is maintained and no longer switches to ADMIN account.
