Links to System Requirements and Special Instructions for This Release

1. Supported Stacks
2. Supported Web Browsers
3. ProcessMaker 3.3.0 or later must be installed to upgrade to ProcessMaker 3.3.14

Bug Fixes

This section documents bug fixes for ProcessMaker 3.3.14:

1. **Documents in the database display correctly according to the multiple files status:** The saveForm helper correctly records the changes made to the multiple file control and the documents uploaded.

2. **Create date is not updated when the process is imported normally:** When importing a process, Create Date remains intact and only the Date Updated is changed according to the date when the process was last modified.

3. **Last login time updates appropriately:** The last login registers the login action regardless of the logout action.

4. **Corrected unit in memory limit field - System Section:** The correct data measurement notation was corrected using **MB** for megabytes.

5. **Dependent grids properly display values:** The grid correctly displays the previously stored values of a dependent dropdown in grids.
   - **Scope:** This bug affects ProcessMaker 3.3.12 and 3.3.13.

Known Issues

This section documents known issues for ProcessMaker 3.3.14:

1. **Issue with javascript dropdown with dependency:** It is not possible to set a value in the javascript dropdown without previously opening the options from the UI.
2. **Issue updating a file with invalid MIME TYPE using mobile:** When using the mobile version the uploaded file or files with MIME TYPE invalid shows an error message, but in the Database is saved as "ACTIVE" in the "app_doc_status", in the web version this behavior does not occur.
