1. Supported Stacks
2. Supported Web Browsers
3. ProcessMaker 3.3.0 or later must be installed to upgrade to ProcessMaker 3.3.6

Bug Fixes

This section documents bug fixes for ProcessMaker 3.3.6:

1. **The task information of the Process Map with a Value Based assignment rule correctly displays the user information:** The username of the last user participating in the current task correctly displays in the task information of the Process Map. The bug solution also applies to the following assignment rules: Cyclical, Value Based, Self Service Value Based, Self Service, Reports to and Manual Assignment. Tasks configured as parallel multiple instances don't display the last user information.

2. **The jump action correctly displays the summary form after re-assigning a case:** The jump action displays the summary form as well as the claim and submit buttons if the case is unassigned and the user has the Summary form permission. The jump action displays the case resume and summary form in the following lists: Inbox, Draft, Participated, Paused, Advanced Search, Review and Reassign.

3. **Configuring "max file size" property in the Multiple File and File web controls now validates the `post_max_size` and `upload_max_filesize` global variables in the PHP file:** The validation applies to the smaller value between the web control and the global values. Otherwise, if the user exceeds the maximum in the global values a message displays to alert them of the excess value.

4. **The default time zone now is configured correctly when the Multi Time Zone feature is disabled:** When the `system_utc_time_zone` variable in the `env.ini` file is disabled and a time zone is selected in the ProcessMaker interface, now the dates use the timezone configured in the ProcessMaker interface.

ProcessMaker®
Workflow Simplified

5. **If a script task follows a task configured with actions by email that contains a file control, then the script task properly saves the new values in the variables:** The bug solution applies only to Link to Fill a form.

Known Issues

This section documents bug fixes for ProcessMaker 3.3.6:

1. **When a process ends with a script task, the Case Information displays "Not finished yet" in Mobile:** If a process ends with a script task after running a case in the web application and then goes to Mobile app, the case information displays "Not finished yet."
