Release Notes: ProcessMaker 3.5.6

Release Date: December 16th, 2020

This document contains Release Notes for ProcessMaker 3.5.6. Release Notes are cumulative, and document bug fixes associated with this release unless otherwise noted. A list of older ProcessMaker Release Notes is included at the end of this document.

Links to System Requirements and Special Instructions for This Release

1. Supported Stacks
2. Supported Web Browsers
3. Review the ProcessMaker versions to upgrade to ProcessMaker 3.5.x

Bug Fixes

This section documents bug fixes for ProcessMaker 3.5.6:

1. **Cases open correctly after saving a Dynaform:** Cases open correctly after saving a Dynaform with an empty `Multiple File Uploader field` through `saveForm()`.
   - **Scope:** This bug solution affects ProcessMaker versions 3.5.2 through 3.5.5.

2. **Case descriptions in the Unassigned tray now display correctly:** Case numbers and descriptions display correctly in the Unassigned tray. Then, they also display correctly in ProcessMaker Mobile.

3. **SQL queries work correctly in ProcessMaker functions:** In ProcessMaker functions, SQL queries now just retrieve the required data and not do a `SELECT *`. The SQL best practices optimize the query to prevent future performance problems.

4. **Grid deletes rows correctly:** The **Delete** button works properly when deleting a row in a Grid.
   - **Scope:** This bug solution affects ProcessMaker versions 3.5.2 through 3.5.5.

5. **Empty values in the `setValue()` function works correctly for Radio fields:** The `setValue()` JavaScript helper cleans correctly the Radio field value.

ProcessMaker

Known Issues

This section documents known issues for ProcessMaker 3.5.6:

1. **Email Log does not display correctly the email address:** Email Log displays special characters of the HTML code in the email address of the **To** column.
