Release Notes: ProcessMaker 3.4.9

Release Date: March 30th, 2020

This document contains Release Notes for ProcessMaker 3.4.9. Release Notes are cumulative, and document bug fixes associated with this release unless otherwise noted. A list of older ProcessMaker Release Notes is included at the end of this document.

Links to System Requirements and Special Instructions for This Release

1. Supported Stacks
2. Supported Web Browsers
3. Review the ProcessMaker versions to upgrade to ProcessMaker 3.4.9
4. Due to the first bug solution, this release requires to run the `translation-repair` command.

Bug Fixes

This section documents bug fixes for ProcessMaker 3.4.9:

1. **The Promotion Manager feature displays correctly the Custom label to export processes:** The **Custom** label displays correctly when exporting a process in the Designer process list and the Process Map. Ensure to run the `translation-repair` command for this bug fix.

2. **Conditions set in the first step of a second task evaluate correctly:** Condition(s) added for the first step in a second task now works correctly.

3. **The Documents panel no longer displays the plus icon when trying to drag and drop a file:** In the Documents panel, the plus **+** icon no longer displays because it is not intended usability to drag and drop files between folders.

4. **APP_CUR_USER from the APPLICATION table updates correctly with the UID of the current case user:** The APP_CUR_USER column from the APPLICATION table now updates correctly with the UID of the current case user.

5. **Report Tables configured for Batch Routing populate correctly:** For Batch Routing, current Report Tables populate when cases are in To Do status. Old records added to Report Tables properly batch even with a large number of cases.

ProcessMaker

6. **In the Designer list, column resizing is no longer available:** In the [Designer](), resizing the columns in the process list is no longer available and requires the following:
   - The **Process Title** column is always visible and cannot be hidden from the list of columns that display in the process list.
   - A checkbox column now displays to the left of the **Process Title** column to optionally select all processes in the process list.

7. **The Memory Limit correctly updates in the System Settings:** The [Memory Limit]() correctly updates in [Admin > Settings > System > System Settings]().
