Release Notes: ProcessMaker 3.4.10

Release Date: April 20th, 2020

This document contains Release Notes for ProcessMaker 3.4.10. Release Notes are cumulative, and document bug fixes associated with this release unless otherwise noted. A list of older ProcessMaker Release Notes is included at the end of this document.

Links to System Requirements and Special Instructions for This Release

1. Supported Stacks
2. Supported Web Browsers
3. Review the ProcessMaker versions to upgrade to ProcessMaker 3.4.10

Bug Fixes

This section documents bug fixes for ProcessMaker 3.4.10:

1. **USR_ID no longer synchronizes in Active Directory:** After synchronization between Active Directory and ProcessMaker users, the USR_ID no longer synchronizes and does not break the correlative numeration in the USERS table.

2. **Message History Permission now works correctly in task notifications:** Permission correctly adds to the process, and notifications correctly work for the Message History in tasks.

3. **The process routes correctly after removing an unsanctioned file in a Multiple File control:** The process routes correctly after removing an unsanctioned file in a Multiple File control and no longer displays **"This row doesn't exist!", blocking the process until you refresh the page**.

4. **Output Documents no longer are corrupt and display correctly new custom fonts:** When generating PDF in Output documents, new custom fonts display correctly. Additionally, to enable the arialuni.ttf that has non US-ASCII characters, see the TCPDF configuration file.

5. **In unassigned cases, the previous task information displays correctly:** In unassigned cases, the **Claim Case** screen displays correctly the previous task information.

6. **Parallel tasks with self-service task assignments included in total count:** When multiple self-service tasks are completed in parallel, those tasks are included in the total count of completed unassigned tasks.
