Release Notes: ProcessMaker 3.6.1

Release Date: February 24th, 2021

This document contains Release Notes for ProcessMaker 3.6.1. Release Notes are cumulative, and document improvements and bug fixes associated with this release unless otherwise noted. A list of older ProcessMaker Release Notes is included at the end of this document.

Links to System Requirements and Special Instructions for This Release

1. Supported Stacks
2. Supported Web Browsers
3. Review the ProcessMaker versions to upgrade to ProcessMaker 3.6.x
4. ProcessMaker Dynaforms do not allow the upload of invalid files when the Multiple file control is required. In this case, the control does not display the validation warning (red color), but it displays the following error message: **Form cannot be submitted because file(s) build-vendor.php (are/is) invalid**.

Bug Fixes

This section documents bug fixes for ProcessMaker 3.6.1:

1. **One email notification is sent for each user:** ProcessMaker uses the TO destination to send one email to all users configured in tasks.

2. **Multiple file upload field validates PHP files correctly:** After uploading a PHP file with a Multiple file upload control, the Dynaform validates properly if the field is required and if it is a valid file.

3. **Datasource property displays values correctly:** All options available for the datasource variable display properly when working with the suggest control. The prefix @? must be used in grids to make references.

4. **Report tables evaluate the data properly when working with checkbox controls**: After regenerating report data for Report Tables, checkbox values save the proper values (1 or 0). The same happens when creating new reports.

5. **Passwords are no longer stored as plain text:** Special characters used in passwords save and encrypt correctly for the User Authentication Sourced in Advanced LDAP.

ProcessMaker

6. **Group Sync option does not create duplicated groups with the same name:** After using the option **Group Sync** in the **Synchronize Groups** administration section, ProcessMaker evaluates duplicated group names as follows:
   ○ If the instance (1) has already duplicated groups with the same name, (2) both or none of them have been used to synchronize users, and (3) are empty, the older one is used for the synchronization.
   ○ If the instance has already duplicated groups with the same name and one of them has users assigned and the other is empty, the one that has users assigned is used for the synchronization.
   ○ The following message displays if there are duplicated groups that have to be removed manually: **It was identified in the workspace duplicated groups, please remove manually these groups**.

7. **Imported processes update correctly the created date field:** After importing a process, there are three options:
   ○ If it is the first time importing this process, the created date updates with the server time.
   ○ If the process updates when imported, the created date is not changed.
   ○ If the process imports with a new ID, the created date updates with the current date.

8. **Fixed label in Advanced Search button:** Option `Clean All` button in the Advanced Search inbox is now labeled as `Clear All.`

Previous Release Notes

Refer to the previous Release Notes from ProcessMaker versions 3.2 through 3.6.0:

- 3.6.0
- 3.5.11
- 3.5.10
- 3.5.9
- 3.5.8
- 3.5.7
- 3.5.6
- 3.5.5
- 3.5.4
- 3.5.3
- 3.5.2
- 3.5.1
- 3.5.0
- 3.4.11
- 3.4.10
